Vaccination Recommended for Lambs at Marking Time

Receive their first dose of Glanvac.
Glanvac 3 B12 will also give them a head start in energy production.
Scabiguard: Scabby Mouth vaccination is applied by a single scratch on a bare area of skin with a Scabiguard applicator.
Gudair: For control of Ovine Johne's Disease(OJD).

Pain Relief for Mulesing

Tri-Solfen Pain Relief is a topical anaesthetic and antiseptic solution for use at mulesing.

Harvestaire Lamb Marking Cradle DELUXE 5 Bucket Unit Pictured

Includes tray, vaccine arm and detachable cradle arms.

- Automatic release of lambs
- Easy loading
- Wide cradle option for large lambs - 2" wider
- Labour saving - people + time
- Less damage to joints
- Lambs held calmly

Call Kristy if you would like a quote on a package to suit your mulesing requirements

Te Pari Docking Iron - High Wind Model

The Te Pari Scissor Action 'high wind' Docking Iron enables lambs to be docked virtually anywhere, without the need for a baseboard under the tail.

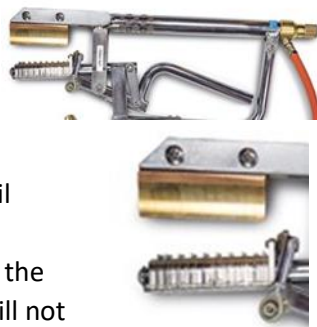

Surgical docking is less stressful to lambs, and searing leaves a clean, sealed wound that reduces lamb losses due to infection and fly strike etc.

Features include Copper Alloy searing head for swift heat up, heat retention and longer life. As well as a holder that deflects spent gas back over cutting head preventing cooling and gas wastage.

Patesco Docking Iron

Based on the proven design of the LPG Te Pari Standard Docking Iron the new Te Pari Patesco Docking Iron treats the end of the tail in such a way the upper surface of the end of the tail heals with bare skin rather than wool. The bare area on the top of the end of the tail is of sufficient size that the wool will not grow long enough to fall over the end of the docked tail and allow dags to form. The benefits of this new docking iron is that it leaves end of tail with no wool hanging over it which helps prevent dag formation. It features a patented rotating anvil system that stretches wool during docking process.

THE WORLD'S FIRST DRENCH GUN THAT "THINKS" FOR ITSELF!

- Battery powered for ease of use & reduced hand strain
- Improved drench performance with exact dose based on animal weight
- Eliminates costly over drenching
- Reduces drench resistance caused by under drenching

G20 Drench Gun

TE PARI REVOLUTION INJECTOR ELECTRONIC VACCINATION GUN

- Able to perform over 1000 injections per battery charge
- The injector can administer any vaccine or medication intramuscularly, subcutaneously or intra-dermally/trans-dermally
- Does not require an external power source

V20 Vaccinator
