

TRURO
AGENCIES

The background of the lower half of the page is a soft-focus photograph of a rural landscape. On the left, a tall, grey metal windmill stands in a field of dry, yellowish grass. In the distance, there is a small, dark-roofed house and several scattered trees under a warm, orange-hued sky, suggesting a sunset or sunrise.

National Livestock Identification System (NLIS)

The National Livestock Identification System (NLIS) is Australia's system for identifying and tracing:

- sheep
- lambs
- goats.

All sheep movements are recorded on the national NLIS database. The mob based system enables animals to be traced to their property of birth and last property of residence. It also allows Australia to contain and manage major disease or food safety incidents.

Download [the NLIS moving and selling sheep and goats using the mob-based database \(PDF 1.9 MB\)](#) brochure for more information.

All properties with sheep and goats require a [property identification code](#) (PIC). All sheep and goats must be identified with a visually readable NLIS device before being moved to any property or location with a different PIC. They must also be accompanied by movement documentation. Movement documents must be kept for 7 years.

NLIS devices

There are two types of NLIS devices used for the permanent identification of sheep:

- breeder tags
- post breeder tags.

Breeder tags

Breeder tags are for identifying sheep and goats still on their property of birth. They can be any colour except pink.

It is recommended that coloured tags are attached according to what year the animal was born:

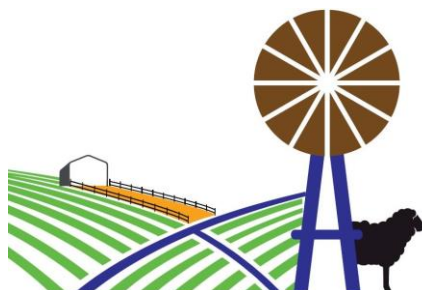

•2010 – orange	2011 – light green	2012 – purple	2013 – Yellow
•2014 – red	2015 – blue	2016 – black	2017 – white.
•2018 – Orange	2019 – Light Green	2020 – Purple	2021 – Yellow
•2022 - Red	2023 – Blue	2024 – Black	2025 - White

Post breeder tags

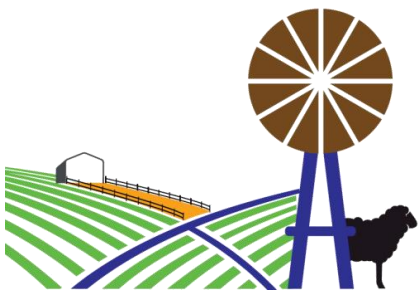

Post breeder tags are attached to sheep and goats that:

- have moved from their property of birth and lost their original tag
- where it is not practical to record the original PIC on their tag on the movement document.

They must be pink in colour.

RFID Ear Tags

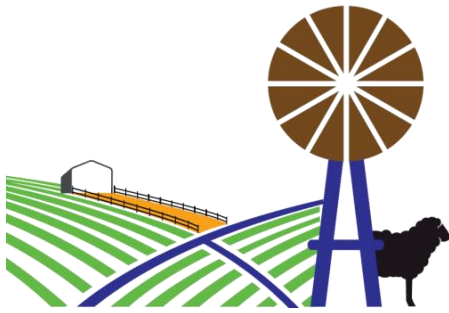

Our business is dedicated to supplying the agricultural community of Australia with the highest quality and innovative identification tags, applicators and microchips. At the core of this is an utmost focus on delivering products that ensure life-long retention and readability of the products.

The Zee Tags brand has been in existence since 1991 and is founded on the vary foundations noted above and ultimately to deliver a product that meets the needs of the user and official tagging programs.

Our complete range of tag products consists of RFID and visual tags covering all animal (including domestic pet), horticultural and viticulture sectors across the Australian agricultural industry. The appropriate products are compliant with the official NLIS scheme including RFID HDX technology.
