

Hydraulic Oil

Wool Press Recommended

HVI 46

Hydraulic HVI products are specialised premium hydraulic fluids which have been formulated to handle extremes of operating temperatures, pressures, power densities and fluid flow rates which are associated with very high horse-power hydraulic systems.

The oils provide unique, long-life operating service characteristics by a combination of anti-wear, detergent and very shear stable viscosity-improving additives with proven rust, oxidation, corrosion and foam inhibitors.

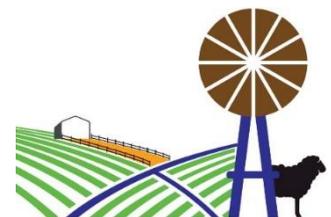

Hydraulic HVI product ensures excellent filterability with hydrolytic and demulsibility stability.

The anti-wear additives in **Hydraulic HVI products** ensure special protection where very high pressures, power densities and temperatures are inherently experienced with high horsepower hydraulic pumps operating at pressures up to 28,000 kPa (4000 psi).

Truro Agencies use & recommend Hi-Tec HVI 46

macnaught
Use MacNaught Oil Transfer Pump to maintain oil levels.
